

Group 12 Lab 1 Report
Tyler Jewell
Andrew Sprayberry
Carmen Stowe

Our code works as outlined in the lab1 specifications.

To compile ServerUDP.c:
`cc ServerUDP.c -o serverudp`

To compile ServerTCP.c:
`cc ServerTCP.c -o servertcp`

The *.py files do not need to be compiled as Python is an interpreted programming language

To run serverudp:
`./serverudp <portnumber>`

To run ClientUDP.py:
Python ClientUDP.py <servername> <portnumber> <operation> <string>, where servername is the server name, portnumber is the port number 10010 + GID, operation is the operation requested (5 for cLength, 80 for disemvoweling, and 10 for uppercasing), and string is the string.

To run servertcp:
`./servertcp <portnumber>`

To run ClientTCP.py:
Python ClientTCP.py <servername> <portnumber> <operation> <string>, where servername is the server name, portnumber is the port number 10010 + GID, operation is the operation requested (5 for cLength, 80 for disemvoweling, and 10 for uppercasing), and string is the string.

There are no know bugs in the programs.
